Deceive [32|64bit]

Deceive is a small, open-source application that can hide your online status in the League of Legends client, effectively showing you as offline to your friends, though you also have the option of making it seem like you have logged in from the mobile app. Setting things up is as simple as can be – you only need to launch the application, as it will open the League of Legends client automatically. If the client is already running, Deceive will shut it down and restart it. The application will be minimized to the system tray automatically, and you only have to right-click the tray icon in order to manage your status in LoL. You can go online again with a couple of mouse clicks, as well as have the client show that you have logged in from the mobile app. Play League of Legends while appearing offline to your friends If you've launched the game using Deceive, your friends will see you as offline, even though your status will be online in your own client. You can still invite anyone, but none of your friends will be able to invite you. The application doesn't prevent you from talking to your teammates in lobbies or once a match has started, so gameplay shouldn't be affected in any way. Won't get you banned, as confirmed by Riot Games, but there is no guarantee that it will keep working in the long term No one wants to get their account banned for using third-party utilities, so you should be happy to learn that the developer has received confirmation from the Riot team that you won't face any negative consequences for using this application. Nevertheless, any future patch could cause this program to stop working, either unintentionally or by design, so make sure to check it after each update. On the whole, Deceive is an excellent tool for League of Legends players who are looking for a way to play while appearing offline to their friends. It is very easy to set up, and completely safe to use, while not affecting your gameplay in any way. We've just released a patch to address the issues caused by a recent update. After tonight's maintenance, we'll be focusing on a handful of new content - including some significant changes coming to Summoner's Rift. The issue relating to last week's update has been resolved, so we're going to start off by focusing on new content, which includes a host of changes to the Runesystem and the Passive Tree, as well as several changes to

But not many people can make them, and many people can't even play them. Scirra is very interested in these issues. The following is a little bit of background from the team, but Scirra is looking for mobile game designers to join the team. Scirra is looking for people with experience in various different areas, but one of the most important qualifications is an ability to communicate effectively. Scirra is a small startup based out of downtown Vancouver. They are in the early stages of the mobile game industry. If you are interested in joining their team, send an email to scirra[at]scirra.com. " -- Subscribe to my channel! "I am a mobile game developer looking to develop my own game. I have been a part of the mobile game community since its early stages. I started work on an iPhone game this year and recently started work on a game for the NGP." The U.S. and China are on a collision course over intellectual property. "Tech companies are building an information-age armada to fight a new cold war against Chinese firms," warns The Wall Street Journal. "It is a sea battle for cyberspace, with each side trying to control the world's information-technology supply chain." This is the first of a four-part series on the topic of entertainment, media, and censorship. In Part 1, we cover topics such as: how entertainment is regulated, issues of media control, social justice, and political correctness. For a copy of our license terms, please visit the library. Rollback also goes beyond the single player game to act as a graphics framework for Mac OS X systems. From its built-in server, it allows users to share their graphical libraries among several applications or even other computers connected over a network. The software is ideal for those seeking a robust graphics framework for their projects and games, and there are numerous reasons why this application is unique. Features: * Shared Graphics Library – The rollback framework allows users to share their OpenGL and OpenGL ES libraries among many applications at the same time. * Server-side – The application can run in two modes, either in the server or client-side. * Framework – Mac OS X users have many options when it comes to software libraries, but the rollback framework only needs one OpenGL or OpenGL ES rendering library, whether it is shared by only one application or several. * Framework-Driven – With an open architecture, the rollback framework is completely free, meaning that users can customize its features in order to get the best performance out of their computers. * Remote – Rollback allows users to share their graphical libraries with computers connected over a network, rather than locally. * Dynamic – Every connection can have its own version of the rollback framework, and users can easily switch between them at any time. * Small – The software only needs two files for its operation and a few lines of code to be activated, and its design is very simple. * Easy to use – The application isn't difficult to install, and users will never need to deal with external servers. * Free – The rollback framework is completely free of charge, and users are not required to pay for anything in order to enjoy its full functionality. * Network-capable – Users can share their graphical libraries with computers connected over a network in order to get the best performance of their computers. * Extremely reliable – The rollback framework is based on open source projects, and the developers have received a lot of support from a lot of users and professionals. Installing Deceive on Mac OS X Instructions for installing the Deceive application on Mac OS X can be found in this page. Dota 2 has always been a very popular game, and in November of 2012, Valve announced a much-requested feature – a stand-alone Steam client with Dota 2. The client is now live for download in the Steam Store, and has support for downloading Dota 2 game files, opening game lobbies, and more. You can now download and install the standalone client and keep it open while you play Dota 2. Here are the game files and how to download them. To download the Dota 2 client, click the "View" tab in Steam, and then click "Install client". The list of games on the right contains some Dota 2 files. You can either select one, or scroll down and click "Show more". Once you've selected a file, click the "Install" button to start downloading it. Here are the Dota 2 files available for download: Dota 2 Client Using the standalone Steam client with Dota 2 If you've installed the standalone Steam client, you can now play Dota 2. In fact, it will be easier to do so than before. If you've got any Dota 2 game files, you can simply drag them into your library, and they'll automatically start downloading and installing in the background.
